## ABSTRACT OF THE DISCLOSURE

## METHOD AND SYSTEM IN A CLIENT COMPUTER SYSTEM FOR GENERATING AND DISPLAYING A LOCAL SERVER CLOCK SYNCHRONIZED WITH A SERVER CLOCK USING A CLIENT CLOCK

A data processing system and method are disclosed 5 for generating and displaying a local server clock which is synchronized with a server clock using a client clock. The data processing system includes a server computer system, which includes a server clock, and a client computer system, which includes a display and a client 10 clock. Data is requested by the client from the server computer system to be displayed on the client computer system's display. The data is then received in the client computer system. The client computer system determines a current time indicated by the server clock. 15 The client computer system generates a local server clock. Thereafter, the local server clock is updated utilizing the client clock. The local server clock and the data are then displayed together on the client's 20 display.
